Report

January 15, 2008

Brian's Farewell

This is Brian Lemcke's last week on the job. It is an understatement to say that he has done a wonderful job on the school and other projects and will be sorely missed. We have six applications to review for his replacement.

Harbor Developments

The Harbor Advisory Committee met again to finalize the float specifications in preparation for another round of grant applications and further the design process. We are proceeding with a timber float designed with fire suppression, power, lighting and potable water (seasonal). We are also working to repair the grid and seaplane float.

Water & Sewer Projects

We are working with Carson Dorn to finalize the plans for replacing the remaining asbestos concrete water lines downtown (1st, Mission & Willard). We are preparing an application to DEC for a low-interest loan for this and the forcemain sewer project. The water tank project should be advertised very soon.

Street Paving

We are developing worksheets that details the cost and scope of work for many of the local roads and will have a list of streets for the assembly to prioritize at the February meeting. Obviously there are more roads to repair than money to fix them.
